# 10 — Canva Editing Guide

## The Design System Behind Every Template — and How to Recreate or Edit It

### 1. Design Principles

AUTHENTIC + NATIVE + MODERN + RELATABLE + CONVERSION-FOCUSED

| Do                                         | Avoid                                      |
|--------------------------------------------|--------------------------------------------|
| Real phone photos and footage              | Stock photos of models in offices          |
| One clear message per frame                | Paragraphs of text                         |
| Clean, rounded text boxes                  | Heavy gradients, bevels, drop shadows      |
| Casual sans-serif fonts                    | Script fonts that are hard to read         |
| Native-looking bubbles, comments, stickers | Copies of specific app interfaces or logos |
| Brand colour used as an accent             | Brand colour flooding every surface        |
| Space around the product                   | Busy collages                              |

If a viewer would think "that's an ad" before they think "that's interesting", simplify.

### 2. Canvas Sizes

| Asset                                   | Canva custom size             | Notes                        |
|-----------------------------------------|-------------------------------|------------------------------|
| Reels / TikTok / Shorts / Stories video | 1080 × 1920 px                | Main video format            |
| Instagram / Facebook Feed               | 1080 × 1350 px                | 4:5 — default for static ads |
| Square                                  | 1080 × 1080 px                | Carousels, marketplace       |
| Pinterest                               | 1000 × 1500 px                | 2:3                          |
| LinkedIn feed                           | 1080 × 1350 or 1200 × 1200 px |                              |
| YouTube thumbnail (optional)            | 1280 × 720 px                 |                              |

**Tip:** In Canva use **Resize** (paid plans) or duplicate the design and create a new custom size, then copy/paste elements across.

### 3. Safe Zones (9:16)

Platform buttons, captions and usernames cover parts of the screen. Keep key text and the product inside the safe zone.

In **Canva**: create a transparent rectangle guide at those margins on a hidden layer, or use **File** → **Settings** → **Show rulers and guides** and drag guides to 250 px (top), 1520 px (bottom), 60 px (left) and 900 px (right, allowing for the icon column).

For 4:5 feed: keep a 60 px margin on all sides; avoid the bottom 120 px if you'll show a "Shop Now" overlay.

## 4. Typography Hierarchy

| Level               | Use                                         | Size (on 1080 wide) | Weight            | Max words    |
|---------------------|---------------------------------------------|---------------------|-------------------|--------------|
| <b>H1 — Hook</b>    | First-frame hook text                       | 64–80 px            | Bold / Extra Bold | 8            |
| <b>H2 — Section</b> | Step labels, "Before / After", list numbers | 48–56 px            | Bold              | 5            |
| <b>Body</b>         | Supporting text on photos                   | 34–40 px            | Medium / Regular  | 20           |
| <b>Subtitles</b>    | Burned-in captions                          | 44–52 px            | Bold              | 3–6 per line |
| <b>Micro</b>        | Names, dates, terms, "no filter"            | 24–28 px            | Regular           | 10           |
| <b>CTA</b>          | Button/pill text                            | 36–44 px            | Bold              | 3            |

**Line spacing:** 1.1–1.2 for headlines, 1.3–1.4 for body. **Letter spacing:** 0 (don't stretch).

## 5. Font Pairing Recommendations

All available in Canva's free library at the time of writing (check your plan):

| Style           | Headline               | Body               | Best for                                         |
|-----------------|------------------------|--------------------|--------------------------------------------------|
| Clean creator   | Montserrat Bold        | Montserrat Regular | Any — safest choice                              |
| Friendly modern | Poppins SemiBold       | Inter Regular      | SaaS, digital, coaching                          |
| Soft beauty     | DM Serif Display       | DM Sans            | Beauty, skincare, wellness (serif headline only) |
| Bold & punchy   | Anton / League Spartan | Open Sans          | Fitness, offers, food                            |

| Style                     | Headline                           | Body    | Best for                |
|---------------------------|------------------------------------|---------|-------------------------|
| Casual handwritten accent | Caveat or Nanum Pen (accents only) | Poppins | Labels, arrows, "notes" |

**Rule:** maximum 2 fonts per design, plus one handwritten accent if needed.

## 6. Text Placement

- **Hooks:** top third of the safe zone, centred or left-aligned.
- **Labels (Step 1, Day 3):** top-left corner inside safe zone, same position every time.
- **Supporting text on photos:** bottom-left over a subtle darkening (black, 0–40% opacity), never over faces.
- **Never** cover the product or the creator's mouth.
- **One text block per frame** in videos; change text with each scene.

## 7. Caption & Subtitle Styling

Many people scroll with the sound off — always add subtitles.

**Standard UGC subtitle style** - Font: Montserrat or Poppins Bold, 44–52 px - Colour: white text with black outline (2–4 px) **or** white text on a black rounded box at 60–80% opacity - Position: middle to lower-middle, above the bottom safe zone - 3–6 words per line, maximum 2 lines - Highlight 1 keyword per line in your brand accent colour (optional)

**How to add in Canva:** Canva's auto-caption feature (where available) → edit text → apply style. Or add text boxes timed to each clip on the timeline. CapCut's auto-captions can also be exported and brought into Canva as a finished video.

## 8. Sticker Usage

| Sticker type                     | Use for                   | Limit         |
|----------------------------------|---------------------------|---------------|
| Arrows / hand-drawn circles      | Point to product features | 1–2 per frame |
| ✓ / ✕ marks                      | Comparisons, do/don't     | Pairs only    |
| Rating stars                     | Real reviews only         | 1 row         |
| "No filter" / "Real result" chip | Before/after              | 1             |
| Timer / clock                    | Speed demos               | 1             |
| Offer badge                      | Genuine promotions        | 1             |

Style: flat, simple, one or two colours. Avoid 3D, glitter or cartoonish clip-art that looks dated.

## 9. Emoji Usage

- **1–2 emoji per text block**, at the end of a line.
  - Use emoji to add *tone*, not to replace words: 😡 frustration, 🙄 curiosity, ✨ result, 📌 CTA, ❤️ warmth, 📌 save.
  - Avoid emoji in the middle of headlines and in serious categories (finance, health) keep them minimal.
- 

## 10. Screenshot Placement

- Place screenshots (reviews, messages, app screens) on a **rounded card** with a soft shadow (Canva: Elements → rounded square frame, shadow effect 10–20%).
  - Scale to **70–85% of the canvas width** so text stays readable.
  - **Blur** surnames, profile photos, emails and order numbers (Canva: Edit photo → Blur brush, or cover with a solid shape).
  - Use **generic designs**: plain white or light-grey bubbles, simple sans-serif — don't replicate a specific app's logos, icons or exact interface.
- 

## 11. Product Image Placement

- Product should occupy **30–50% of frame** in product shots.
  - Place on the **centre or right third**; text on the left.
  - Remove backgrounds only for end cards — UGC body shots should keep the real environment.
  - Keep the **label facing camera** at least once.
  - Canva: use Background Remover (paid) for end cards; add a soft shadow under the cut-out so it doesn't float.
- 

## 12. Video Clip Placement (Canva Video Editor)

1. Create a 1080 × 1920 design.
  2. Upload clips → drag to the timeline; each clip = one scene/page.
  3. Right-click → **Fill background** so the clip fills the frame without black bars.
  4. **Trim** each clip to 1.5–4 seconds (scissors icon / drag edges).
  5. Add text per scene; set text animation to *Fade* or *Pop* (keep it subtle).
  6. Transitions: use *None* (hard cut) by default — hard cuts feel native. Use *Match & move* or a simple dissolve only for before/after reveals.
  7. Add audio: voiceover track + music at 10–20% volume.
  8. For picture-in-picture (face bubble on screen recording): place the face clip on top, crop to a circle frame, position bottom-left above caption zone.
- 

## 13. CTA Placement

- **Video**: final 2–3 seconds, lower-middle, as a rounded pill: brand colour background, white bold text, 36–44 px.

- **Photo:** bottom-left or bottom-centre pill, 60 px from edges.
- **Carousel:** CTA only on the last slide + a subtle "swipe →" on slide 1.
- Keep CTA text to **2–4 words** ("Shop now", "Try it free", "See how it works").

## 14. Brand Colour Customisation

Build a mini palette of 4 colours:

| Role          | Use                                  | Example                             |
|---------------|--------------------------------------|-------------------------------------|
| Neutral light | Backgrounds, cards                   | #F7F5F2                             |
| Neutral dark  | Text                                 | #1A1A1A                             |
| Brand accent  | CTA pills, keyword highlights, ticks | Your main brand colour              |
| Soft accent   | Stickers, secondary chips            | A lighter tint of your brand colour |

**In Canva:** Brand Kit (paid) → add colours → apply with one click. Free plan: save hex codes in a text note and use the colour picker → "+" to add them to Document colours. **Global swap:** click any coloured element → colour picker → "Change all" to replace a colour across the whole design. **Accessibility:** make sure text has strong contrast against its background (dark text on light, or white text on a dark/saturated colour).

## 15. Logo Placement

- UGC ads should feel creator-made: **keep logos small and quiet.**
- Photo ads: bottom-right corner, 80–120 px wide, 60 px margin, 70–90% opacity.
- Video ads: **only on the end card**, or as a small watermark in the top-left inside the safe zone. Many UGC ads work without a logo at all because the product itself is the branding.
- Use a transparent PNG version (white and dark versions for different backgrounds).

## 16. Recommended Canva Template File Structure (for the seller)

When building the editable Canva files that ship with this kit, organise them like this so buyers can find everything:

```

Canva — UGC Ad Creative Template Kit
├── A_Video_Templates_Problem_Solution (V01–V08) — 9:16, 8 pages
├── B_Video_Templates_Product_Discovery (V09–V16) — 9:16, 8 pages
├── C_Video_Templates_Testimonial_Review (V17–V24) — 9:16, 8 pages
├── D_Video_Templates_Demo_Showcase (V25–V32) — 9:16, 8 pages
├── E_Video_Templates_Founder (V33–V38) — 9:16, 6 pages
├── F_Video_Templates_Educational (V39–V44) — 9:16, 6 pages
├── G_Video_Templates_Offer_Sales (V45–V50) — 9:16, 6 pages
├── H_Photo_Templates_Feed (P01–P24) — 4:5, 24 pages
├── I_Photo_Templates_Story_Versions (selected P templates) — 9:16
├── J_Carousel_Template (P18) — 4:5, 5 pages
├── K_End_Cards_and_CTA_Pills — 9:16 + 4:5
├── L_UI_Elements_Library — comment bubbles, review cards, chips, arrows, stars, timers, ✓/✗
└── M_Subtitle_Style_Presets — 4 caption styles
  
```

**Each video template page** should contain: placeholder video frame (grey box labelled "Drop clip here"), hook text in position, scene labels matching the timeline, CTA end card, and a notes panel (Canva's page notes) with the template's timeline copied in.

**Share links** as "Template link" (Share → Template link) so each buyer gets their own copy and can't edit your master. Place all links in a single "Template Links" page inside `01_Start_Here.pdf`.

## 17. Pre-Export Quality Checklist

- ☐ Hook visible and readable in the first second
- ☐ All text inside safe zones
- ☐ Subtitles on and synced
- ☐ Product visible within the first 3–5 seconds
- ☐ One CTA, clearly stated and shown
- ☐ No spelling errors (read it backwards once)
- ☐ Personal data blurred on screenshots
- ☐ Music licensed for commercial use (use the platform's commercial library or royalty-free tracks)
- ☐ Claims are true and supportable

## 18. Export Settings

| Asset              | Canva export | Setting                                            |
|--------------------|--------------|----------------------------------------------------|
| Video              | MP4 Video    | 1080p, all pages                                   |
| Static ad          | PNG          | Size ×1 (or JPG high quality if file size matters) |
| Carousel           | PNG          | All pages, download as separate files              |
| Print (not needed) | —            | —                                                  |
